Read entire label, use according to instructions. KeyPlex AWP can be applied through most standard or field type sprayers after dilution and mixing with water in accordance with label instructions. For best results, spray coverage should be uniform and complete. Maintain constant agitation or recirculation in spray tank. USE LOWER RATES FOR LIGHT TO MODERATE PEST INFESTATIONS AND HIGHER RATES FOR HEAVY INFESTATIONS. REPEAT APPLICATION AS NEEDED. Mixing: Add KeyPlex AWP to one-half (1/2) tank under agitation containing water of 45° F or greater before filling to desired level. When combining with other products, such as adjuvants, insecticides or fungicides, add these products first, when the tank is approximately 1/2 full.
